

## ASRock 4Core1600P35-WiFi+

For years ASRock has been regarded as very much a budget motherboard manufacturer to introduce motherboards with more enthusiast-level features and even products that are more overclocker-friendly. ASRock started offering Gigabit ethernet and IEEE-1394a Firewire on their motherboards, but this month with their 4Core1600P35-WiFi+ a step forward showing that they are able to offer an economically-priced motherboard with an integrated 802.11g WiFi. We have our hands on the ASRock 4Core1600P35-WiFi+ and well this P35 creation performs on Linux.
