

AMD Catalyst 8.7 Linux Driver Released

Since last month's release of Catalyst 8.6 for Linux we've seen the introduction of new graphics cards and we've been allowed to share with you that CrossFire is coming with some new announced features. Today AMD has released the Catalyst 8.7 Linux driver which includes some ground-breaking features, but it does bring a few improvements.

In fact, the new features in this release are just bringing official Ubuntu 8.04 LTS support...<p></p><p></p></div>
